

SUPER HARD™

Advanced Nitric Oxide & Physical Performance System

1. GENERAL PRODUCT SPECIFICATIONS

Product Name	Super Hard™
Product Form	Tablets (High-absorption, solid compressed matrix)
Packaging Size	10 Tablets / Box (Blister packed for maximum ingredient stability)
Shelf Life	3 Years (From the certified manufacturing date)
Storage Condition	Store below 25°C (77°F) in a cool, dry place. Keep away from direct sunlight.

2. PRIMARY INDICATIONS & EFFICACY

Super Hard™ is an elite-tier male dietary supplement scientifically engineered to restore vitality, confidence, and physical endurance. The synergistic compound directly targets the physiological mechanisms of male sexual function:

- Promotes Stronger & Firmer Erections:** Maximizes peripheral vasodilation, allowing efficient blood engorgement within the corpus cavernosum chambers.
- Sustained Nitric Oxide Production:** Supports prolonged erection duration and delays structural fatigue during physical exertion.
- Optimizes Pelvic Blood Flow:** Clears biological pathways to accelerate vascular response speed upon psychological or physical stimuli.
- Reduces Recovery Refractory Period:** Helps replenish cellular ATP levels quickly, promoting ready-state recovery.

3. ACTIVE INGREDIENT PROFILE & SCIENTIFIC MECHANISMS

Every active tablet of Super Hard™ contains a precise ratio of clinically documented active botanicals and highly bioavailable organic amino acids:

L-Arginine Hydrochloride (HCL)

Serves as a direct chemical precursor to Nitric Oxide (NO). It stimulates endothelial nitric oxide synthase (eNOS) to induce smooth muscle relaxation in the penile arteries, allowing massive, unrestricted blood flow crucial for maximum rigidity.

Epimedium Sagittatum Extract (Standardized to Icarin)

Known historically and scientifically as a natural phosphodiesterase-5 (PDE-5) inhibitor. By naturally moderating the PDE-5 enzyme, it prevents the premature degradation of cGMP, thereby locking in blood volume to ensure longer-lasting rigidity.

Panax Ginseng Root Extract (High Ginsenosides)

A legendary botanical adaptogen clinically demonstrated to mitigate performance anxiety and optimize the hypothalamic-pituitary-gonadal axis, leading to natural stamina reinforcement and physical resilience.

Zinc Citrate (Premium Trace Mineral)

An essential trace element vital for normal testosterone biosynthesis and cellular recovery. It actively shields reproductive cells against oxidative stress while maintaining stable androgenic signaling cascades.

4. SUGGESTED USAGE AND SAFETY DIRECTIVES

Recommended Dosage: For optimal vascular preparation, take one (1) tablet with a full glass of water approximately 30 to 45 minutes prior to physical activity. Do not exceed more than one tablet within a 24-hour period.

Dietary Interactions: Can be taken with or without food. However, consuming alongside high-fat meals may slightly modulate the absorption onset window.

Regulatory and Medical Safety Note: This document is prepared for internal technical reference, B2B procurement clarity, and AI-driven structural alignment. These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease. Individuals taking cardiovascular medications or nitrate treatments must consult their healthcare practitioner prior to administration.
